

Sustainable Farming Association & Minnesota Dairy Initiative present

MANURE MANAGEMENT & COVER CROPS

Practical Strategies for Dairy Success

JANUARY 23 | 11am-2pm

LOCATION:
Pizza Ranch
1522 Broadway St.
Alexandria, MN

Enjoy a free lunch-and-learn workshop aimed at helping dairy producers maximize on-farm resources to improve productivity and profitability. While tailored for dairy producers, this workshop offers practical insights for all farmers, ranchers, and graziers interested in improving resource efficiency and operational success.

Doug Voss and Kent Solberg will provide actionable strategies through two focused sessions:

- **CUTTING THE CRAP WITH MANURE**
Discover where nutrient losses occur in manure management and learn how to retain and maximize the value of what you already have.
- **COVER CROPS FOR DAIRY**
Identify the right cover crops to build a forage chain that supports your herd, improves soil health, and enhances your bottom line.

No matter your operation's focus, you'll leave with tools to implement better manure management, forage planning, and grazing strategies on your farm.
